

Sigma Tandem System

Last Updated Thursday, 03 September 2009

In engineering, the word Sigma means a "Summation" or "Answer" to the problem. We chose to name our new tandem rig Sigma, because it represents a "Summation" of everything we have learned about tandem equipment, and the people who use it, since 1984. Unlike all other tandem systems, where the drogue was simply tacked onto an existing design, the Sigma was built from the ground up, as a drogue deployed system. Contained within its design is an "answer" to every container related problem we have observed.

For a more detailed look of the Sigma Tandem System, check out our Sigma brochure: [\(HTML\)](#) [\(PDF\)](#) Additional information concerning our tandem systems can be found in our [tandem information letter](#) .
